

Abstract of the Disclosure

5 A through-fitting for a box or bulkhead contains a cavity
which holds grease. When the through-fitting is tightened,
grease from the cavity is automatically injected to seal the
through-fitting. The through-fitting may be used in below-
grade junction boxes. A junction box has various useful
features. The junction box can be conveniently injection-
molded. The junction box has application in fields including
10 wired telephone connections.
